

## PRICING OF GAS NETWORK SERVICE STARTING FROM 1 JANUARY 2022

### SCOPE OF APPLICATION

This pricing of gas network service shall apply to the gas network service contracts of the distribution system operator, Tampereen Sähkölaitos Oy. The gas network service is subject to the general terms of connection to the gas distribution network.

The pricing is based on the Natural Gas Market Act and the related decrees as well as the decisions and guidelines issued by the Energy Authority.

For a justified reason, the distribution system operator is entitled to change the provisions and prices included in the network service pricing by notifying the customers of the changes in accordance with the general terms of network service for the gas distribution network.

Gas taxes, strategic stockpile fee and other equivalent issues will be billed according to the guidelines by the Energy Authority

The pricing is effective until further notice starting from 1 January 2022. The listed prices are exclusive of tax.

### GAS NETWORK SERVICE PRICING

The pricing is effective until further notice. In the transmission product price list, the transmission price of gas is determined based on the higher heating value (HHV) of the gas as follows:

**Power fee [€/month]** is determined based on the maximum measured hourly power for gas consumption  $P_{max}$  [MW]. The hourly powers are reviewed at one-hour imbalance settlement periods for the measurement period of the previous 12 months. The capacity charge is updated each month. The capacity charge covers the fixed costs of the transmission system.

The power fee is determined by the  $P_{max}$  [MW] power as follows:

<b><math>P_{max}</math> [MW]</b>	<b>Power fee [€/month]</b>
less than 1	$25 + P_{max} \times 700$
1 – 10	$425 + P_{max} \times 300$
more than 10	$2425 + P_{max} \times 100$

**Transmission fee [€/MWh]** is determined by the gas energy consumption at the site of supply. Transmission fees are used to cover capital expenses for the gas transmission system as well as the operating, monitoring, maintenance and investment expenses relating to the transmission.

The unit price for the transmission fee is €3,00/MWh
